

PIP Animal Housing Cleaner– trial at OOO ‘Ekostatus’

Location: Kiev, Ukraine

Date: September 2009 – October 2009

Products used: PIP Animal Housing products

Co-ordinator: Jouri Bryskine

Goal of the test

To verify the effects of using PIP Animal Housing products at a duck farm.

Results

Two test groups were selected for the test, with each test group containing about 8,000 ducks. The stable of one group was treated with the PIP Animal Housing products whereas the other was cleaned with regular cleaning products.

At the end of the cycle (42 days) the following results were recorded:

- A reduction of risk in mortality by 53.7% for the PIP group.
- An increase in the meat production (67.1% for PIP versus 62% for regular cleaning).
- A higher meat quality was obtained when PIP is used.
- Less risk on diseases were noticed in the PIP group.
- There was no use of antibiotics in the PIP group.
- Bad odors were eliminated.
- There was a general increase in the productivity of the PIP group.

All these benefits came from a better level of hygiene due to the PIP Animal Housing Cleaning.

Conclusion

The frequent application of PIP Animal Housing products resulted in an improvement of the general conditions at a duck farm.
